1 Introduction

This is the guide for Preview Server version 4.0.

This section contains information on the following topics:

- [About the Document](#)
- [Customer Feedback and Suggestions](#)
- [Customer Support Requests](#)

1.1 About the Document

This manual covers the information needed in order to configure and operate Preview Server version 4.0.

This section contains information on the following topics:

- [Document Structure](#)
- [Related Documents](#)
- [Conventions](#)

Document Structure

This guide introduces and explains the different aspects of Preview Server.

This section gives an introduction to this document.

Section 2 lists details about the Preview Server Windows service: main features, known limitations, and the steps in a basic workflow.

Section 3 describes software and hardware requirements and recommendations.

Section 4 provides guidance on how to install, configure and remove Preview Server.

Section 5 describes how to work with Preview Server; step-by-step instructions for various procedures, and also user interface descriptions.

Related Documents

For complementary information, see the following documents:

- [Graphics Plugin for NLE Administrator's Guide](#)
- [Viz Engine Administrator's Guide](#)
- [Viz Multichannel User's Guide](#)
- [Viz Pilot User's Guide](#)

- Viz Trio User's Guide

Conventions

The following typographic conventions are used in this document:

- Italic is used for non-hyperlink external references, such as related documents, books, or Internet pages. Italic is also used to emphasize words.
 - The color blue is used for hyperlinked external references, and also internal references to sections or document elements (such as tables or figures) in the current document.
 - Bold refers to GUI components.
1. Numbered paragraphs are used to indicate tasks that must be carried out.

1.2 Customer Feedback and Suggestions

We encourage suggestions and feedback about our products and documentation.

To give feedback and, or suggestions, please identify your local Vizrt customer support team at www.vizrt.com.

1. Click on Contact (top of page).
2. The Vizrt office which is nearest to your location will be shown, or select from the list of Vizrt offices.
3. Click on the Contact button for the office you want.
4. Complete the required details in the window that opens.

Note: If this message is for Customer Support, and there is a Support Contract in place, then click on the 'For support requests, please visit our support portal' link in the message window.

A Vizrt representative will contact you as soon as possible.

1.3 Customer Support Requests

Support Requests are supported by Vizrt if customers have a valid Service Agreement in operation. Customers who do not have a Service Agreement and would like to set up a Service Agreement should contact their regional sales representative (see [Customer Feedback and Suggestions](#)).

When submitting a Support Request, relevant and correct information should be given to Vizrt Support, to make sure that Vizrt Support can give the quickest and best solution to your Support Request.

This section contains information on the following topics:

- [Before Submitting a Support Request](#)

- [Submitting a Support Request](#)

1.3.1 Before Submitting a Support Request

Before a Support Request is submitted make sure that you:

Read:

- The relevant User Guide or Guides
- The release notes

and Check:

- That the system is configured correctly
- That you have the specified hardware, tested and recommended versions

Always refer to your Vizrt Service Level Agreement document.

1.3.2 Submitting a Support Request

When completing a Support Request, add as much information as possible.

Content of a Support Request

The report should contain information about these topics:

- **Problem description:** Include a good description of what the problem is and how to reproduce it. Specify your workflow. Remember to use simple English.
- **Screen shots and illustrations:** Use these to simplify the message. These are extremely useful for Vizrt Support.
- **Software configuration:** Add exact versions of software (-build) used. This is also extremely important information.
- **System locale:** Specify the Region and Language settings of the system.
- **System log files:** Send the system log files.
- **Crash log files:** Send the error report and crash log files from the crash (e.g. Viz Trio program folder <viz install directory>).

Note: Check: If the operating system is Windows 7 and up, dump files can be stored at: <userdir>\AppData\Local\VirtualStore\<viz install directory> (check user rights).

- **System Config file:** Send the system config file(s) (e.g. initialization files, Viz Engine config file, and default.xml for the Media Sequencer).
- **Hardware configuration:** Add exact versions of hardware used, especially for Viz Engine.

Optional:

- **System setup:** Describe differences in the installation, if any, from the recommended setup.

- System Network: Add a description of how the network, bandwidth, routers, and switches are configured.

Always refer to your Vizrt Service Level Agreement document.

To submit the Support Request:

1. On the www.vizrt.com page, click on Support.
2. Click on Report a case.
3. Click on LOG IN to login to the Customer and Partner portal.
4. At the top of the Case Management page, click on Report a Case.
5. In the online form complete the required minimum information (shown by a red asterisk) and click SAVE.
6. In the saved Support Case that opens, complete the various text boxes and upload any required documents, files, etc. (see [Content of a Support Request](#)).

To track the status of open support tickets, login to the Customer and Partner portal. Add information or communicate about the cases directly with the support team.

2 About the Preview Server

Vizrt's Preview Server manages a pool of Viz Engines. Clients, such as Viz Multichannel, Viz Pilot and Viz Trio, can send requests to the Preview Server, asking for available Viz Engines, which may provide frames for thumbnails and snapshots in an ongoing preview process.

As the name implies, the Preview Server provides snapshots of scenes for the clients during the creative preview process. The preview snapshots provide the user an idea about the looks of the graphics when finally played out in high resolution on a Viz Engine.

The Preview Server provides load balancing, and it can be used to create a redundant renderer pool.

The Preview Server is a Windows service. Upon installation, the service is started, and the startup type is by default set to Automatic. The service will then start every time the operating system is started, and it will run in the background for as long as Windows is running. For more details, see [To see the status of the Preview Server service](#).

This section contains information on the following topics:

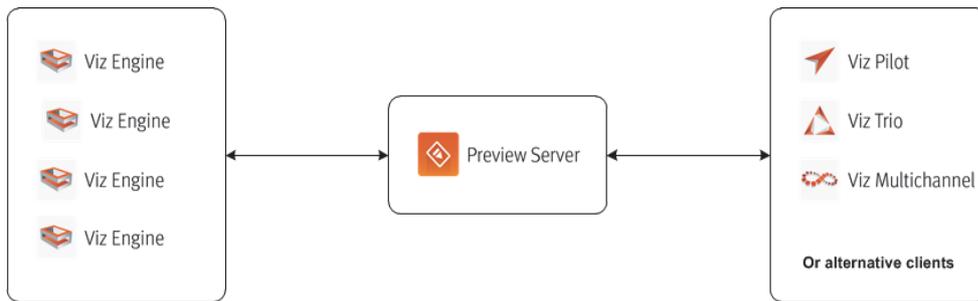

- [New Features in This Version](#)
- [Basic Workflow](#)

2.1 New Features in This Version

For details about the new features in this Preview Server version, see the Preview Server Release Notes.

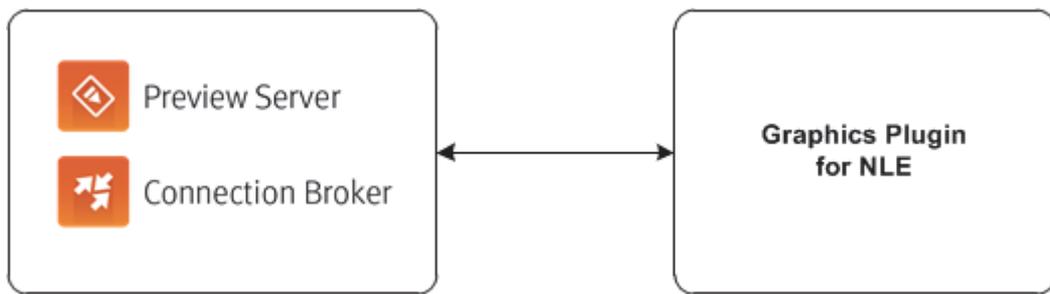

2.2 Basic Workflow

A typical use case is as follows: A Viz Trio user may want to add graphics to a video in Viz Trio's Timeline editor. A video clip is dragged to the timeline, and also one or more data elements (graphics). In the Timeline editor, the graphics elements are added as placeholders on the video timeline. The user wants to display snapshots of the graphics on these placeholders, and hence a Preview Server connection has been set up (for details, see [Configuring Preview Server Settings in Viz Trio](#)). Viz Trio sends a request to the Preview Server, asking for an available Viz Engine that can generate the necessary preview snapshots. The Preview Server passes the task through to a suitable Viz Engine, which in turn generates the snapshots that were requested by Viz Trio.

When used together with Vizrt's control applications Viz Multichannel, Viz Pilot, and Viz Trio, the Preview Server is installed from a stand alone installer.

Alternatively, when used in a workflow together with the Graphics Plugin for NLE, the Preview Server should be installed from a joint installer package, containing both the Preview Server and the Connection Broker.

For more details on this joint Preview Server and Connection Broker setup, see the Graphics Plugin for NLE Administrator's Guide.

- [Common Procedures](#)

3 Requirements and Recommendations

This section contains information on the following topics:

- [Software Requirements](#)
- [Hardware Requirements](#)

See Also

- [Preview Server Release Notes](#)

Software Requirements

- Microsoft .NET Framework 4.5, or later

Hardware Requirements

- Licensed Viz dongles

Note: The Preview Server can run on the same machine as a Viz Engine, but it is recommended to specify additional Viz Engines in order to spread the load.

4 Installation and Configuration

This section contains information on the following topics:

- [Installation](#)
- [Configuration](#)
- [Removal](#)

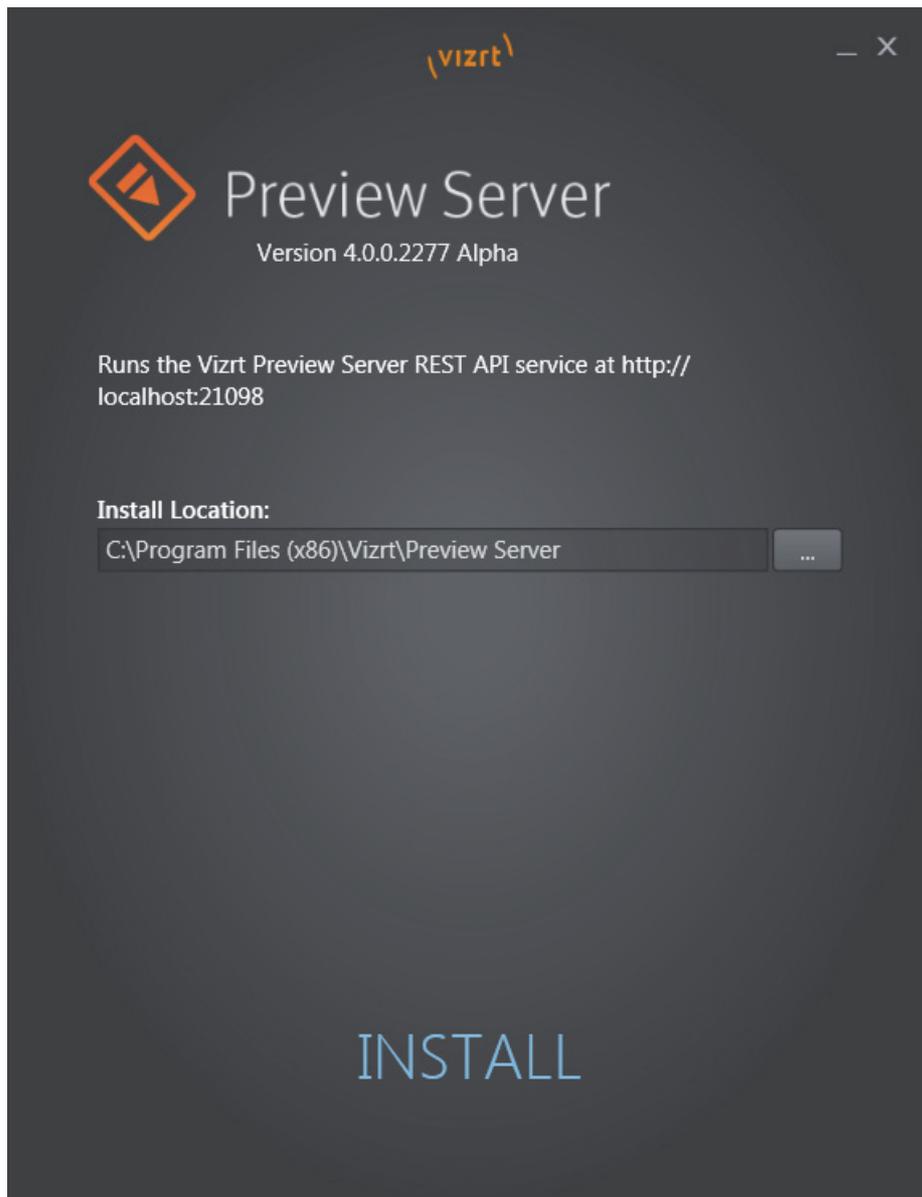

4.1 Installation

This section contains information on the following topics:

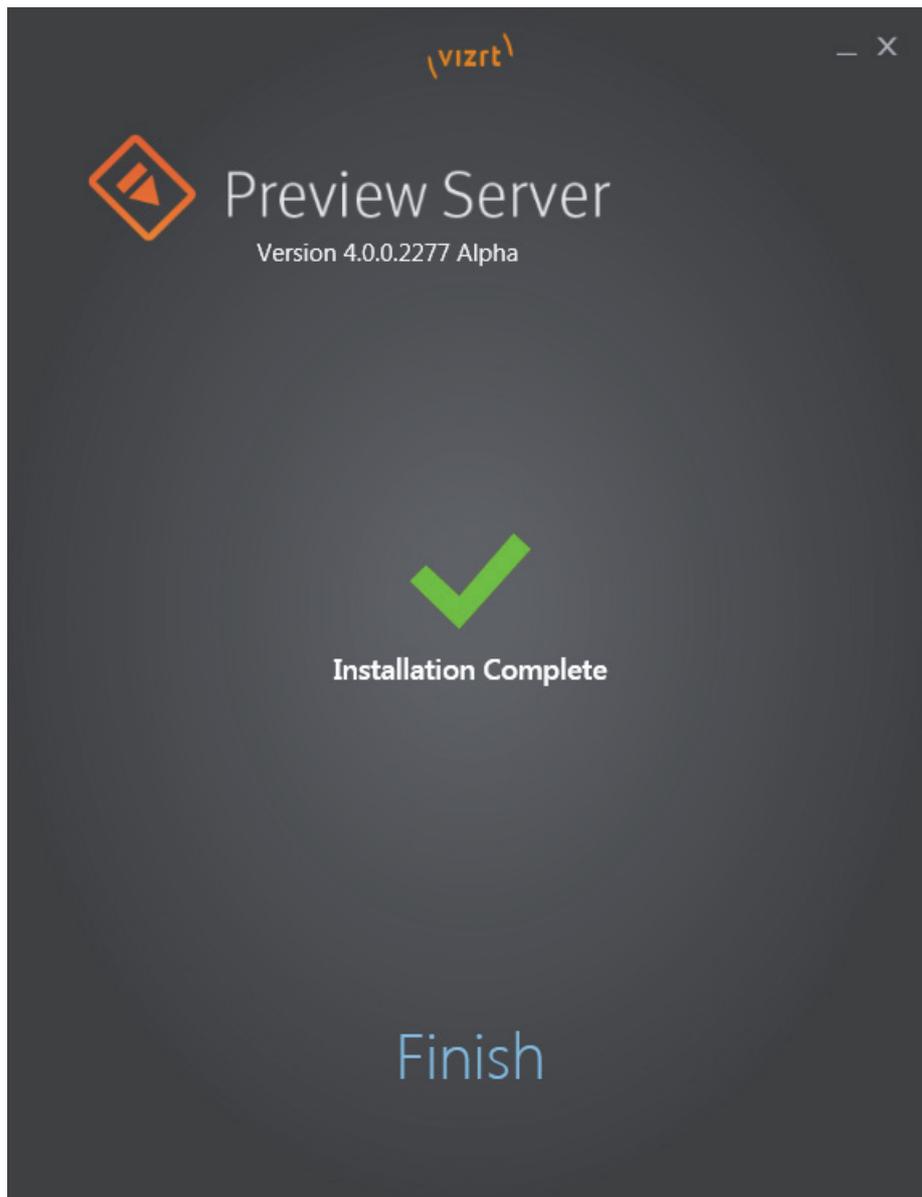

- [To install Preview Server](#)

To install Preview Server

1. Run the Preview Server installer file (*.exe) to start the Preview Server Setup.
2. Make sure that the Install Location is correctly defined.
3. Click INSTALL.

4. When the installation is complete, click FINISH.

Note: The Preview Server service is automatically started, and the startup type is set to Automatic, meaning that the service will start every time the operating system is started, and then run in the background for as long as Windows is running. For more details, see [To see the status of the Preview Server service.](#)

See Also

- [Configuration](#)
- [Removal](#)

4.2 Configuration

This section contains information on the following topics:

- [Preview Server Service](#)
- [Viz Engines](#)
- [Service Configuration](#)
- [Viz Pilot Data Server](#)
- [Configuring Preview Server Settings in Viz Trio](#)

Preview Server Service

The Preview Server is a Windows Service. It sets up an HTTP REST service on port 21098 on the host it is running on. This service accepts requests for graphical snapshots of layout elements from a Viz Engine.

Viz Engines

The Preview Server can run on the same machine as a Viz Engine (also used for the data element preview in Viz Pilot's newsroom client), but it is also possible to specify additional Viz Engines in order to spread the load. Frame requests will be balanced across available Viz engines in a way that will minimize the memory load of each engine.

The pool of Viz Engines is configured on the [Preview Server Web Interface – Home page](#).

Scaling of the system should be monitored to avoid excessive client waiting time and potential overload of the Viz Engine(s).

Service Configuration

Modify the Preview Server service's behavior with the following settings in the `PreviewServer.exe.config` file.

`VizEnginePollIntervalMilliseconds`

This setting determines how often a render engine's availability is checked.

`VizEngineTimeoutMilliseconds`

After the specified amount of milliseconds, the render engine list should stop trying to obtain the availability status and declare the engine unresponsive.

`CacheMaxAge`

Frames are cached in memory, allowing quicker responses when requesting frames that have been requested previously. By default, frames are cached for a maximum of one day. This behavior can be changed by modifying this setting, which specifies the maximum number of seconds to retain cached results.

`VizEngineCleanupIntervalMilliseconds`

Once a scene in the Graphic Hub is modified all cached snapshots using that scene must be evicted from the cache. This interval specifies how often the scene modification dates are checked to detect scene changes.

UseRunLengthEncoding

It is recommended to switch on run length encoding if relatively high-resolution snapshots are requested.

CorsAllowedOrigin

This setting can be used to restrict the allowed cross origin resource sharing pattern that is utilized by the Preview Server.

DebugMode

Debug mode enables extended logging for troubleshooting.

ServicePort

The service port setting enables changing the port number for regular HTTP requests of the Preview Server service. The service does not accept any HTTP requests if 0 is specified.

SecurePort

The secure port setting allows changing the port number for secure HTTPS requests of the Preview Server service. The service does not accept any HTTPS requests if 0 is specified.

An example Configuration Section:

```
<configuration>
  <applicationSettings>
    <Vizrt.Frames.Properties.Settings>
      <setting name="VizEnginePollIntervalMilliseconds"
serializeAs="String">
        <value>5000</value>
      </setting>
      <setting name="VizEngineTimeoutMilliseconds"
serializeAs="String">
        <value>1000</value>
      </setting>
      <setting name="CacheMaxAge" serializeAs="String">
        <value>86400</value>
      </setting>
      <setting name="VizEngineCleanupIntervalMilliseconds"
serializeAs="String">
        <value>60000</value>
      </setting>
      <setting name="UseRunLengthEncoding" serializeAs="String">
        <value>False</value>
      </setting>
    </Vizrt.Frames.Properties.Settings>
  </applicationSettings>
</configuration>
```

```

        </setting>
        <setting name="CorsAllowedOrigin" serializeAs="String">
            <value>*</value>
        </setting>
        <setting name="DebugMode" serializeAs="String">
            <value>False</value>
        </setting>
        <setting name="ServicePort" serializeAs="String">
            <value>21098</value>
        </setting>
        <setting name="SecurePort" serializeAs="String">
            <value>4443</value>
        </setting>
    </Vizrt.Frames.Properties.Settings>
</applicationSettings>
</configuration>

```

Viz Pilot Data Server

For details on how to give all applications with a connection to the Viz Pilot database access to the Preview Server, see the Data Server chapter of the Viz Pilot User's Guide.

Configuring Preview Server Settings in Viz Trio

If using the Preview Server together with Viz Trio, various Preview Server settings must be defined on the Viz Trio side.

1. In the Trio Configuration, navigate to the Connectivity > Viz One panel.
2. Enter the hostname and port number in the Preview Server Host box (format `hostname:port`).

It will then be possible to display snapshots of graphics as video overlays in Viz Trio's Timeline editor.

If the Preview Server should also load the actual thumbnails in the playlist, instead of just showing the default template thumbnails throughout, perform the following steps:

1. In the Trio Configuration, navigate to the User Interface > Page List/Playlist panel.
2. Enable the Use Preview Server to load thumbnails box.

For more details, see the Viz Trio User's Guide.

4.3 Removal

This section contains information on the following topics:

- [To remove Preview Server](#)

To remove Preview Server

This description applies for Windows 10.

1. Open Apps & features (Start > Settings > System > Apps & features).
2. Select Vizrt Preview Server.
3. Click Uninstall.

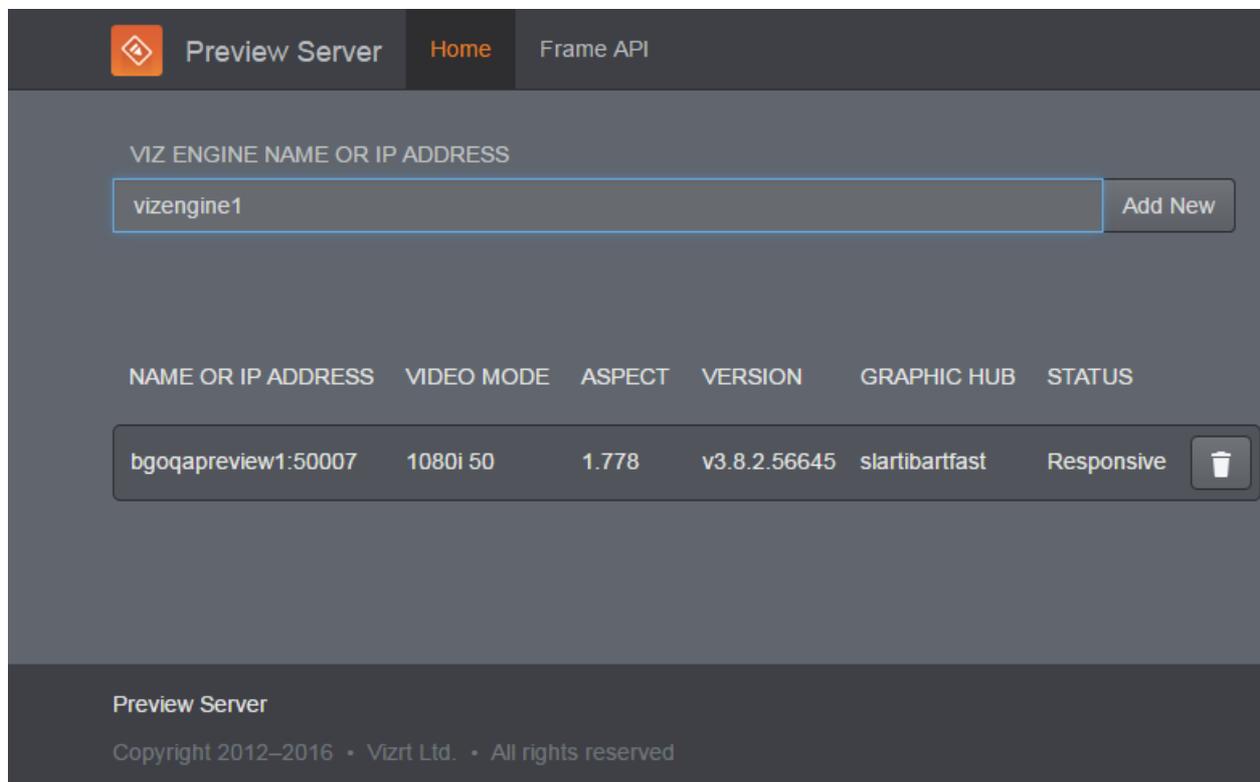

5 Working with Preview Server

This section contains information on the following topics:

- [Preview Server Web Interface](#)
- [Common Procedures](#)

5.1 Preview Server Web Interface

The Preview Server has a web interface for accessing the Preview Server's features.

For details on how to open this interface, see [To access the Preview Server web interface](#).

The Preview Server web interface contains a menu with links to the following resources:

- [Home](#)
- [Frame API](#)
- [About](#)

5.1.1 Home

From the Home page of the [Preview Server Web Interface](#), it is possible to add, monitor and remove Viz Engines from a pool of renderers. The Preview Server can interact with one or more Viz Engines.

See Also

- [Viz Engine Configuration](#)

5.1.2 Frame API

Clicking the Frame API link in the [Preview Server Web Interface](#) opens the REST Frame API documentation.

This document describes the REST (Representational State Transfer) API over HTTP, provided by the Preview Server for requesting rendered frames from a Viz Engine.

It includes information on the Resources and Data Types that are used in the interface.

Example: `http://<hostname>:21098/doc/rest_manual`

5.1.3 About

Clicking the Preview Server or version number link in the [Preview Server Web Interface](#) opens the About Preview Server window.

This window contains information about the installed Preview Server version. A link to the list of third party component credits is also available here.

5.2 Common Procedures

This section contains procedures related to the following topics:

- [Installation, Configuration, and Removal](#)
- [Startup and Shutdown](#)
- [Viz Engine Configuration](#)

See Also

- [Basic Workflow](#)

5.2.1 Installation, Configuration, and Removal

For details on how to install, configure, and remove the Preview Server service, see the related sections:

- [Installation](#)
- [Configuration](#)
- [Removal](#)

5.2.2 Startup and Shutdown

This section contains information on the following topics:

- [To access the Preview Server web interface](#)
- [To see the status of the Preview Server service](#)
- [To start the Preview Server service](#)
- [To stop the Preview Server service](#)

To access the Preview Server web interface

- Click Start > All Programs > Vizrt > Preview Server > Preview Server Config, or
- Double-click the Preview Server Config desktop icon (if a shortcut has been created), or
- Navigate to the Preview Server web interface in a browser, using the host name of the machine running the Preview Server, and port 21098.

Example: `http://<hostname>:21098/`

Note: The default web browser will be used when opening the Preview Server web interface from the Windows Start menu or desktop.

To see the status of the Preview Server service

1. Click Start > Control Panel > System and Security > Administrative Tools > Services.
2. Scroll down to the Vizrt Preview Server service.

The status of the Preview Server service is listed in the Status column.

See Also

- [To start the Preview Server service](#)
- [To stop the Preview Server service](#)

To start the Preview Server service

1. Perform the steps in [To see the status of the Preview Server service](#).
2. Make sure that the Preview Server status is empty.
3. Right-click the Preview Server entry in the list.
4. From the menu that appears, click Start.

Note: Upon installation, the Preview Server service is started, and the startup type is set to Automatic. This means that the service will start every time the operating system is started, and it will run in the background for as long as Windows is running. However, if the Preview Server service has been manually stopped, the service can be restarted by following the steps in this procedure.

To stop the Preview Server service

1. Perform the steps in [To see the status of the Preview Server service](#).
2. Make sure that the Preview Server status is set to Started.
3. Right-click the Preview Server entry in the list.
4. From the menu that appears, click Stop.

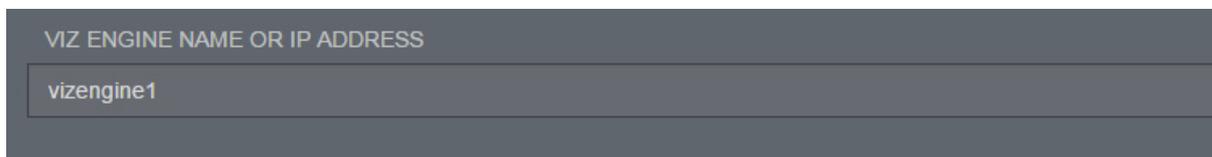

5.2.3 Viz Engine Configuration

This section contains information on the following topics:

- [To add a Viz Engine](#)
- [To remove a Viz Engine](#)

To add a Viz Engine

1. Open the Preview Server [Home](#) page.

The image shows a dark grey rectangular area representing a text input field. At the top, there is a light grey placeholder text that reads "VIZ ENGINE NAME OR IP ADDRESS". Below this, the text "vizengine1" is entered into the field.

2. Enter the Viz Engine hostname or IP address in the text box.
3. Click the Add New button.

Note: If not specified, the Viz Engine will be added with the default port number 50007. When using Viz Engines in a so-called dual channel setup, it is possible to run multiple instances of the Viz Engine on a single host. Each instance uses a unique port, which means that two Viz Engines should only be considered duplicates when both the hostnames and port numbers are identical. When referring to Viz Engines in a dual channel setup, type the port number after the host name (for example VizEngine1:51007).

To remove a Viz Engine

1. Open the Preview Server [Home](#) page.

NAME OR IP ADDRESS	VIDEO MODE	ASPECT	VERSION	GRAPHIC HUB	STATUS	
bgoqapreview1:50007	1080i 50	1.778	v3.8.2.56645	slartibartfast	Responsive	

2. Click the trash can icon next to a Viz Engine entry.

6 Troubleshooting

This section contains typical troubleshooting questions and answers that may arise while installing, configuring or using the Preview Server.

If you do not find answers to your issues, please contact your local Vizrt representative and submit a [Customer Support Requests](#).

This section contains information on the following topics:

- [Troubleshooting Tips](#)
- [Known Limitations](#)

6.1 Troubleshooting Tips

- [Services do not start after installing latest Preview Server](#)

Services do not start after installing latest Preview Server

Machines with Apple's Bonjour installed sometimes refuse to install the Preview Server. Uninstalling Bonjour may resolve this installation issue.

6.2 Known Limitations

- It is possible to add the same renderer multiple times on the Preview Server [Home](#) page, if using different spellings. For example, a renderer can be added by entering its hostname, and then, if entering the IP address, the renderer will be added again. Adding the same renderer twice will produce the wrong snapshots.
- Snapshots of scenes with no key defined will result in empty images.
- Adding video mode Viz Engines as renderers could produce incorrect results in scenes using ControlVideo.
