Disclaimer

Vizrt provides this publication "as is" without warranty of any kind, either expressed or implied. his publication may contain technical inaccuracies or typographical errors. While every precaution has been taken in the preparation of this document to ensure that it contains accurate and up-to-date information, the publisher and author assume no responsibility for errors or omissions. Nor is any liability assumed for damages resulting from the use of the information contained in this document. Vizrt's policy is one of continual development, so the content of this document is periodically subject to be modified without notice. These changes will be incorporated in new editions of the publication. Vizrt may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time. Vizrt may have patents or pending patent applications covering subject matters in this document. The furnishing of this document does not give you any license to these patents.

Antivirus

Vizrt does not recommend or test antivirus systems in combination with Vizrt products, as the use of such systems can potentially lead to performance losses. The decision for the use of antivirus software and thus the risk of impairments of the system is solely at the customer's own risk.

There are general best-practice solutions, these include setting the antivirus software to not scan the systems during operating hours and that the Vizrt components, as well as drives on which clips and data are stored, are excluded from their scans (as previously stated, these measures cannot be guaranteed).

Technical Support

1 Viz Pilot 8.9.1 Release Notes

Release Date: 2023-10-04

These are the release notes for Viz Pilot version 8.9.1. This document describes the user-visible changes that have been made to the software since release 8.9.0.

1.1 Changes And New Features

· Support for Viz Pilot Edge version 3.0 has been added (VCP-8394).

1.2 Fixed Issues

- Director Macro opening, taking and closing of a template is not working the first time (VCP-8379).
- · Importing Transition Logic background scenes is now possible again (VCP-8356).
- The Playlist XML Filler now creates groups with Playout Mode 'None' which prevents UI errors on the elements in the group (VCP-5156).
- The Finished column in the old playlist is now properly updated when data elements are saved with a new 'Finished' status (VCP-8297).
- Fixed issue when updating an item in the newsroom system could take the item directly on air when using the old playlist (VCP-8385).
- · Increasing size of the font in the playlist will not crop the text (VCP-8391).

2 Viz Pilot 8.9.0 Release Notes

Release Date: 2023-03-31

These are the release notes for Viz Pilot version 8.9.0. This document describes the user-visible changes that have been made to the software since release 8.8.0.

2.1 Changes And New Features

- The Pilot Configuration application now supports selecting HTTPS as a communication protocol (VCP-8225).
- The Pilot Data Server configuration in Media Sequencer now supports HTTPS as a communication protocol. This requires MSE version 5.5 (VCP-7336).
- TLS protocol version 1.2 is now used when configured to use HTTPS in communication with GH REST (VCP-8349).

2.2 Fixed Issues

- Fixed installation failures linked to WebView2: no attempt to install another version will be made if an existing WebView2 version is already installed (cf. known issue on previous 8.8 version) (VCP-8309).
- Fixed the Spellcheck screen that was allowing users to ignore the *maxlength* value for text fields (VCP-8273).
- Fixed the thumbnail preview that wouldn't refresh when an element was updated in the playlist (VCP-8279).
- Fixed error handling for the script functions SendSingleCmd and QuerySingle (VCP-7326, VCP-8322).
- Fixed issue when opening a data element from Director in Pilot Edge that is a library element (VPE-3274).
- Fixed issue where the Variant dropdown menu in the Director's playlist was empty (VCP-8311).
- Fixed issue where the "Add Library" check box in the Save dialog does not present the correct status (VCP-8295).
- Fixed issue when the overwrite button was not disabled, when ax_disable_data_overwrite setting is used (VCP-8321).
- Fixed issue that when editing templates using the same scene, the "last modified" time was updated for all of them, even if the scene was not changed (VCP-8237).
- There is now a clear warning about the consequence of deleting a template in the Open Template dialog box (VCP-7274).
- The macros *viz:reset_viz_by_channel* and *viz:clear_viz_layer* correctly look up the program channel of the active profile if the first argument is empty (VCP-6786).
- The cursor position from Options > Preferences > Playlist is now respected. This means that the selected item will stay at this vertical position in the playlist window, if possible, while the elements are moving up and down (VCP-8200).
- The macros playlist:next, playlist:previous, playlist:select_element_after_last_locally_taken, playlist:next_ready and playlist:previous_ready, keep keyboard focus in the playlist for the selected item (VCP-8196).
- The thumbnail for a control image field in a template opened in Director, now loads images from HTTPS connections (VCP-8350).
- When saving a template with a shared script unit, TemplateWizard will not update the
 modified date on all the templates sharing the script unit. This will prevent
 unresponsiveness when a large number of templates share the updated script unit
 (VCP-8366).

2.3 Known Issues

Moving and reordering playlists in the MSE Playlists window is no longer possible. A
workaround is to use VdomConfig (see below) (VCP-7504).

- The DragDrop event for panels is not triggering. Please use OnEndDrag in the source panel instead (VCP-6573).
- The PageControl component in TemplateWizard does not have the context menu anymore, but it is still accessible by right clicking the property page (VCP-7582).
- If UI is scaled over 100%, the date picker may be invisible in "Delete Data Items". It can still be accessed by navigating to it with the TAB key and pressing ALT+ARROW_DOWN.
- Templates created in Template Builder can not be saved to file via Template Wizard (VCP-8184).
- The Oracle connection to the Media Sequencer will not work properly unless the schema name is added in uppercase letters. From Media Sequencer 4.1.1, the schema name entered in the Media Sequencer Configuration in Director is converted automatically, but for earlier versions you need to type it in uppercase letters yourself (VCP-6723).
- After upgrading from versions before Pilot 5.7, some customers have experienced a change in the default text in the templates. The text components in the templates start showing old text that was originally in the control text fields when the Template Wizard created the templates. There is a manual tool for fixing this on the database. Please contact Vizrt Support for more information (VCP-3273).
- On Windows 7, any application using the .NET 4.5.2 framework may cause a delay before showing the user interface after being launched. This includes the Pilot Configuration program (VCP-3649).
- The property editor in Template Wizard does not support Unicode directly. To edit properties like *UTF8Text*, the user needs to press the ellipsis button (...) (VCP-3123).
- In Director, it is not possible to drag and drop images to a control list component in a template if the new playlist is in use. To work around this go to **Options > Preferences** in the main menu, choose **Playlist** and check the *Use playlist from <= 5.7* option (VCP-4193).
- Changing the value of the *Imported* property on the TStoryImporter or TDirectStoryImporter in the property editor in Template Wizard designer causes an error (VCP-4290).
- If you have more than one version of Pilot installed on a machine, and uninstall a version 7.0 or earlier, the other versions will not work anymore. To fix this, find them in **Add or remove programs** and select **Repair** (VCP-5091).
- There can only be one single version of Pilot News registered at a time. If you have multiple versions of Pilot installed on a machine, you can register the version you want to use by repairing the installation (VCP-6484).
- Connecting to a Graphic Hub with a user that requires a password is not supported (VCP-5585).
- Elements in playlist can have default concept with their old name after the concept has been renamed. The best way to work around the problem is to avoid renaming concepts already in use. If you still need to rename a concept, the only way to fix a corrupted data element that uses it is to open and save it again (VCP-4623).
- In the new playlist, the list of variants is not populated until a concept has been selected in the drop-down list (VCP-5776).
- The Viz Tab in Director only works if the Viz Engine in the preview channel is on port 6100 (VCP-5711, VCP-5791).
- Template Wizard does not detect conflicting field identifiers when scenes are added to or changed in a transition logic template after it has been created (VCP-5795).

- Payload sent using *RunUpdateScript* is not conforming to VDF specifications by not including the correct default namespace (VCP-4569).
- The following macros are not implemented for the new playlist:
 - · playlist:insert_playlist_template
 - playlist:update_item_editor
 - playlist:show_toolbar
 - playlist:hide_toolbar
 - playlist:add_selected_dataitems
 - · playlist:reload
 - playlist:neutral_gfx
 - playlist:set_active_on_air
 - playlist:toggle_autocue
 - · playlist:clip
 - playlist:toggle_ab
 - · playlist:set_channel_filter
 - playlist:append_last_in_group
 - playlist:jump_to_ncs_cursor
 - playlist:reset_ncs_cursor
 - playlist:follow_ncs_cursor
 - playlist:set_ncs_cursor
 - playlist:run_selected_with_custom_action
 - playlist:toggle_tally
 - script:run_playlistitem_script
 - script:refresh_playlistitem_script
 - · playlist:environment:add
 - · playlist:environment:get
 - playlist:environment:clear
 - playlist:run_external
 - · playlist:gui_context:add
 - playlist:gui_context:clear
 - playlist:move_selected_down
- The macro *playlist:copy_to_new* does not copy the settings, only the elements of the playlist, if it is used with the new playlist (VCP-5531).
- The macro *playlist:start_on_preview* does not behave in the same way in the new and old playlists (VCP-5645).
- The macro playlist:set_filter does not take effect until the playlist is reopened if called after the macro playlist:open_playlist_by_name (VCP-4039).
- Template script functions used to send commands to Viz Engine (SendSingleCmd, buffer_put, buffer_put_unicode, etc) only work as expected if the Viz Engine is configured to use UTF-8 encoding (VCP-6005).
- Working with Expert mode controls in scenes is not supported in Pilot applications (VCP-5637).
- Accidentally taking a group in the new playlist can mark elements with an error symbol. This simply means that the elements were not taken with the group. The errors can be cleared by doing a Take Out on the group (VCP-5156).

- · Director's Camera Controls feature is no longer supported and will be removed (VCP-5038).
- Triplet editor component has some issues with min-max values (VCP-6560).
- · Drag and drop is never triggered for panel in templates (VCP-6573).
- · Take out does not behave consistently on groups. Use Stop instead (VCP-7199).
- Order management doesn't work in Pilot News when hosted in Octopus Newsroom (VCP-7401).
- AX round-robin GH access is not checking if engines are actually active and ends up stalling (VCP-5471).
- When working with large images (over 4K) in the (new) Crop Tool, the process might run out of memory and stop working. To reduce the likelihood of this happening, avoid clicking the **Preview** button (VCP-7517).
- There might be a minimal risk of cutting wrong letters, especially when it comes to Unicode (such as Cyrillic, Arabic, and Japanese, among others), but it only happens if typing a larger text on the Spellchecker that does not respect the maximum size defined in the Template Wizard, otherwise, there will be no problem (VCP-8273).

2.3.1 Workaround for moving and reordering playlists in the MSE Playlists window

- 1. In Directory, go to Options > Preferences > General > Media Sequencer and find the host name of the Media Sequencer
- 2. Open a browser and go to http://[mse_host]:8580/app/vdomconfig/vdomconfig.html
- 3. Navigate to directory/playlists
- 4. Now reorder and drag playlists in and out of groups and watch the change in Director instantly
- 5. The only difference is that the nodes in VdomConfig has internal names ("New Folder #2 etc) but the order is the same and by having Director and VdomConfig side by side it should be possible to accomplish the same functionality.

2.4 System Requirements

2.4.1 Minimum Hardware Requirements

- · Windows 10
- · 1 GHz 64-bit (x64) processor
- · 2 GB RAM (64-bit)
- · 40 GB hard drive with at least 15 GB of available space

2.4.2 Supported Operating Systems

- · Windows 10 Enterprise
- · Windows 10 Pro

A specific version and service pack of an operating system will not be supported after the official Microsoft support end date, which is also the last date of support from Vizrt. Earlier support end dates will be announced in the release notes for new versions of Viz Pilot.

2.4.3 Minimum Software Requirements

- · Pilot Database, either Graphic Hub 3.6.0 (with Graphic Hub REST 2.6.0) or Oracle 11g.
- Media Sequencer 5.4.0 (Media Sequencer 5.5.0 for communication over HTTPS with TLS 1.2).
- · Viz Engine 4.4.1
- Viz World client 17.0.1. The integration might work with earlier versions as well, but not without issues.
- Pilot Data Server 8.9. The integration should work with earlier versions, but this has not been tested.
- (i) When installing Viz Content Pilot, the Microsoft Webview2 runtime installer package is installed automatically on the target machine silently in the background. At the end of the Content Pilot installation there may be a visible delay, where it looks like the installer is hanging. Please be patient as the installation is still in progress. This runtime package allows Pilot Edge to be hosted inside a browser in Director using separate Microsoft Edge core binaries. This runtime takes about 100 MB to install.

2.4.4 Other Requirements

· Windows Media Player needs to be installed on the system to use the Object Store application.

2.5 Newsroom Systems Used For Testing

- · iNEWS 7.9.0.12
- · ENPS 9.3.4172
- · Octopus X

3 Documentation

Documentation for Viz Pilot Edge is available at the Vizrt Documentation Center:

- · Viz Pilot User Guide
- · Gateway Administrator Guide
- Preview Server Administrator Guide
- · Pilot Data Server Administrator Guide
- · Vizrt iNEWS Command Plugin Administrator Guide

4 Support

Support is available at the Vizrt Support Portal.
